PROFILE

I'm a software developer focused on AI, web, and mobile applications. I enjoy understanding what people need and turning their ideas into software that is useful and easy to work with. I like to stay involved from early discussions through delivery, working closely with clients and teams as the product takes shape. I value clear communication, thoughtful design, and the willingness to keep learning and improving along the way.

CORE SKILLS

Frontend: JavaScript, TypeScript, React, Preact, Next.js, Angular, Tailwind CSS, Bootstrap

Backend & CMS: Node.js, Bun, Express, PHP, Laravel, Python, Django, FastAPI, Spring Boot, WordPress, WooCommerce

Databases: PostgreSQL, MySQL, MongoDB, Firebase, Cloudflare D1

Mobile: Android, Java, Kotlin, Flutter, Dart, React Native

AI & machine learning: TensorFlow, TensorFlow Lite, PyTorch, OpenAI API, LangChain, Object Detection

Cloud & tools: Cloudflare Workers, Durable Objects, R2, Docker, Kubernetes, Git, Postman

EXPERIENCE

Independent Software Developer · Self-employed

Jun 2025 – Present · Self-employed · Singapore

Industry: Financial Services

- Built Equity Funding Source for a Los Angeles mortgage broker. Used Preact and Bun for the borrower, lender, and administrator workflows, including loan applications and document handling.
- Deployed the platform on Cloudflare Workers, with D1 for relational data, Durable Objects for real-time messaging, and R2 for uploaded documents.

Software Developer · Upwork

Mar 2023 – Mar 2026 · Freelance (Remote) · Singapore

Industry: Education Technology & Professional Associations

- Built the Media Pipe and Aegis Android applications for SafeSchoolz, connecting detection alerts, evidence clips, and Twilio call workflows to the HeroEyez portal. Adapted firearm detection for edge devices using TensorFlow Lite and deployed the application in June 2025.
- Developed IIPM.ie from April 2025 to March 2026, expanding WordPress landing pages into a PHP and PostgreSQL membership platform for the Irish Institute of Pensions Management.
- Implemented membership onboarding, qualification reviews, course-progress tracking, annual payments, and PDF certificates, alongside administrative dashboards and reviews.
- Worked through feedback first with the agency, then with the end client. Much of the IIPM.ie work involved turning manual membership paperwork into review screens and automated certificate workflows.

Freelancer · Freelancer.com

2021 – Jun 2025 · Freelance (Remote) · Singapore

Industry: Software Services (Multiple Industries)

- Client work ranged from WordPress sites to React applications and Android features. Used PHP and supporting backend services where the project needed more than a frontend.
- Turned client requests into working screens and application flows, connecting the interface to the backend and testing the complete flow before delivery.
- Returned to implementations after client review to fix bugs and adjust behavior. Followed problems through frontend, backend, and mobile code, depending on where the issue originated.

Software Developer · HeyMax

Jan 2023 – Dec 2023 · Remote · Singapore

Industry: Travel & Loyalty Technology

- Worked on application features that relied on backend integrations. Followed requests from the interface through the service layer to investigate inconsistent behavior, then made changes on the side responsible for the problem.
- Stayed involved through testing and release preparation: checked the affected user flows, resolved issues found during review, and passed on the context needed for teammates to maintain the changes.

DevOps Developer · Portcast

2018 – 2021 · Remote · Singapore

Industry: Logistics & Supply Chain Technology

- Looked after the build-to-deploy path for web services, including environment settings and checks before a release.
- Scripted environment setup and routine operational tasks so the same process could be repeated across deployments.
- When a deployment failed, worked back through logs, configuration, and application behavior to locate the problem and get the service running again.
- Kept deployment and recovery notes alongside the fixes, making the next release easier for whoever was handling it.

Frontend Developer · RemotePeople

Jan 2019 – Dec 2020 · Remote · China

Industry: Human Resources & Global Employment

- Turned design specifications into responsive pages and interactive components. Adjusted layouts for desktop and mobile, then worked through browser differences with the designers.
- Connected forms and page content to backend APIs, including loading, empty, and error states. Refined the interactions with backend developers and incorporated design feedback as the pages took shape.

PROJECTS

Equity Funding Source (Apr 2026 – Jul 2026) — Lending workflows, real-time messaging, and document storage with Preact, Bun, and Cloudflare.

IIPM.ie (Apr 2025 – Mar 2026) — Membership onboarding, course tracking, payments, and PDF certificates with PHP and PostgreSQL.

SafeSchoolz (Jun 2024 – Jun 2025) — Android firearm detection and incident alerts using TensorFlow Lite, Java, and Kotlin.

Drivemond (2024) — Passenger and driver apps with live tracking, payments, and administration using Flutter and Laravel.

Bestinform (2024) — Hotel and restaurant booking platform using Angular and Spring Boot.

Galler-AI (2023) — Prompt-based image generation with React, Node.js, and OpenAI.

James Furniture (2021) — WordPress and WooCommerce storefront with product catalogs, payments, and shipping integrations.
